

In the Specification

Please replace paragraphs [035] on page 7 and [051] on page 12 with the following new paragraphs:

A1 [035] Oscillating drives of that kind are known and are employed in connection with a correspondingly shaped cutting ~~kn-i-fe~~ knife, for example for cutting through an adhesive bead on a windscreen in cases where the windscreen must be exchanged because of a defect, for example. In addition, such tools which are driven in oscillating fashion, have been found to be of advantage for numerous other tasks for which the most diverse sawing tools of oblong, circular or partially circular shape, grinding tools of special shapes or cutting tools in the form of specially designed cutting knives are known.

A2 [051] The shape of the mounting plate 34, illustrated more fully in Fig. 8, is matched to the shape of the recess 49 of the basic element 32. The holes 56, 58 60 intended for passing the clamping elements 36 or the screws are provided with countersunk areas 58, 62 which permit the screws to be centered.
